ELSEVIER

Journal of Materials Processing Technology 98 (2000) 345–348

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 98

Accuracy
Finite difference calculations of the deformations of multi-diameter workpieces during turning, 310
Guidelines for precision hot forging with applications, 182
Acetic acid
Separation of scrap polyethylene pellets by density, 328
Aerospace forging
Manufacturing of aerospace forgings, 189
Air compressor scrolls
Precision forging of aluminum and steel, 196
Alliance strategy
Research initiatives for the forging industry, 162
Analytical modeling
Analytical modeling of drilling and ball end milling, 125
Automotive assembly
Improvement of hem quality by optimizing flanging and pre-hemming operations using computer aided die design, 41

Back-propagation algorithm
Applicability of the modified back-propagation algorithm in tool condition monitoring for faster convergence, 299
Ball end milling
Analytical modeling of drilling and ball end milling, 125
Bauschinger effects
Strain path effects under hot working: an introduction, 267
Blank holder force
Blank holder force (bhf) control in viscous pressure forming (vpf) of sheet metal, 7

CAD
Improvement of hem quality by optimizing flanging and pre-hemming operations using computer aided die design, 41
Investigation of crack formation on the galvalume coating of roll formed roof panels, 53
CAE
Application of cae for hot-forging of automotive components, 176
Cast iron
High-speed machining of cast iron and alloy steels for die and mold manufacturing, 104
Centerless grinding
Efficient and precision grinding of small hard and brittle cylindrical parts by the centerless grinding process combined with electro-discharge truing and electrolytic in-process dressing, 322
Ceramics
Efficient and precision grinding of small hard and brittle cylindrical parts by the centerless grinding process combined with electro-discharge truing and electrolytic in-process dressing, 322
Cermet
Assessment of the thermal effects on chip surfaces, 317
Chip colour
Assessment of the thermal effects on chip surfaces, 317
Closed die
Closed die technologies for hot forging, 165

Closed-loop control circuits
Tendencies in presses and dies for sheet metal forming processes, 260
Closing device
Closed die technologies for hot forging, 165
CNC programs
High-speed machining of cast iron and alloy steels for die and mold manufacturing, 104
Cold forging
Net shape cold forging to close tolerances under qs 9000 aspects, 150
New concepts in die design — physical and computer modeling applications, 212
Tool life in cold forging – an example of design improvement to increase service life, 90
Cold/warm forging
Fe simulation as a must tool in cold/warm forging process and tool design, 143
Competition
Research initiatives for the forging industry, 162
Composites
Effect of thermal residual stress on the high temperature toughening behaviour of tib_2/sic_w composites, 292
Computer modeling
Manufacturing of aerospace forgings, 189
Cost reduction
Automotive parts produced by optimizing the process flow forming – machining, 171
Cushion systems of presses
Tendencies in presses and dies for sheet metal forming processes, 260
Cutting temperature
Assessment of the thermal effects on chip surfaces, 317

Deep drawing process
Tendencies in presses and dies for sheet metal forming processes, 260
Deep drawing with hydraulic counter pressure
Recent developments in hydroforming technology, 252
DEFORM simulations
Evaluation of sheet metal formability, viscous pressure forming (vpf) dome test, 1
Deformation
Finite difference calculations of the deformations of multi-diameter workpieces during turning, 310
Die
Advances in prototype and low volume sheet forming and tooling, 245
Die design
Die design for flashless forging of complex parts, 81
Die life
Application of cae for hot-forging of automotive components, 176

Elsevier Science S.A.
PII: S0924-0136(99)00453-7

Disk blanks
Tooling and process control for splitting of disk blanks, 65
Dome test
Evaluation of sheet metal formability, viscous pressure forming (vpf) dome test, 1
Draw die design
Tendencies in presses and dies for sheet metal forming processes, 260
Drilling
Analytical modeling of drilling and ball end milling, 125

Electro-discharge truing
Efficient and precision grinding of small hard and brittle cylindrical parts by the centerless grinding process combined with electro-discharge truing and electrolytic in-process dressing, 322
Electrolytic in-process dressing
Efficient and precision grinding of small hard and brittle cylindrical parts by the centerless grinding process combined with electro-discharge truing and electrolytic in-process dressing, 322
Enclosed die forging
Precision forging of aluminum and steel, 196

Fastener
High strength fasteners cold forged out of work hardening steel, 135
FE simulation
Fe simulation as a must tool in cold/warm forging process and tool design, 143
FE-model
Finite element simulation of the flow-splitting-process, 70
FEM
Application of cae for hot-forging of automotive components, 176
Evaluation of tube formability and material characteristics: hydraulic bulge testing of tubes, 34
Improvement of hem quality by optimizing flanging and pre-hemming operations using computer aided die design, 41
Investigation of crack formation on the galvalume coating of roll formed roof panels, 53
Ferrules
Efficient and precision grinding of small hard and brittle cylindrical parts by the centerless grinding process combined with electro-discharge truing and electrolytic in-process dressing, 322
Finite difference
Finite difference calculations of the deformations of multi-diameter workpieces during turning, 310
Flashless forging
Die design for flashless forging of complex parts, 81
Flow-Spitting-Process
Finite element simulation of the flow-splitting-process, 70
Tooling and process control for splitting of disk blanks, 65
Forging
Application of cae for hot-forging of automotive components, 176
Automotive parts produced by optimizing the process flow forming – machining, 171
Forging industry
Research initiatives for the forging industry, 162
Forging process
Virtual processing – application of rapid prototyping for visualization of metal forming processes, 116
Fracture toughness
Effect of thermal residual stress on the high temperature toughening behaviour of tib_2/sic_w composites, 292

Gear forging
Guidelines for precision hot forging with applications, 182

Hardening steel
High strength fasteners cold forged out of work hardening steel, 135
Hemming
Improvement of hem quality by optimizing flanging and pre-hemming operations using computer aided die design, 41
High temperature
Effect of thermal residual stress on the high temperature toughening behaviour of tib_2/sic_w composites, 292
Hot forging
Guidelines for precision hot forging with applications, 182
Hot working condition
Strain path effects under hot working: an introduction, 267
HSC technology
High-speed machining of cast iron and alloy steels for die and mold manufacturing, 104
Hydroforming
Evaluation of tube formability and material characteristics: hydraulic bulge testing of tubes, 34
Hydroforming of double blanks
Recent developments in hydroforming technology, 252
Hydroforming process
Recent developments in hydroforming technology, 252
Hydroforming technology
Tube hydroforming: current research, applications and need for training, 224

Insert
Tool life in cold forging – an example of design improvement to increase service life, 90

Limit design
Limit design of porous sintered metal powder machine elements, 335
Liquefied gas
Separation of scrap polyethylene pellets by density, 328

Machining
Automotive parts produced by optimizing the process flow forming – machining, 171
Material testing
Evaluation of tube formability and material characteristics: hydraulic bulge testing of tubes, 34
Metal behaviour
Strain path effects under hot working: an introduction, 267
Metal bonded superabrasive wheels
Efficient and precision grinding of small hard and brittle cylindrical parts by the centerless grinding process combined with electro-discharge truing and electrolytic in-process dressing, 322
Modified back-propagation algorithm for faster convergence
Applicability of the modified back-propagation algorithm in tool condition monitoring for faster convergence, 299
Molding
Advances in prototype and low volume sheet forming and tooling, 245

n-pentane
Separation of scrap polyethylene pellets by density, 328
Net shape forging
Precision forging of aluminum and steel, 196
Neural network
Applicability of the modified back-propagation algorithm in tool condition monitoring for faster convergence, 299
Nitrogen cylinders
Tendencies in presses and dies for sheet metal forming processes, 260
Normal-shear strain path effects
Strain path effects under hot working: an introduction, 267

Oblique cutting
Turning simulations using a three-dimensional fem code, 99
Orthogonal cutting
Turning simulations using a three-dimensional fem code, 99

PAM-STAMP
Numerical and experimental investigation of redrawing of sheet metals, 17
Physical Modeling
New concepts in die design — physical and computer modeling applications, 212
Plasticine
Application of cae for hot-forging of automotive components, 176
Plasticity
Strain path effects under hot working: an introduction, 267
Plasticity/porosity
Limit design of porous sintered metal powder machine elements, 335
Polyethylene pellets scrap
Separation of scrap polyethylene pellets by density, 328
Porous filters
Limit design of porous sintered metal powder machine elements, 335
Porous materials
Limit design of porous sintered metal powder machine elements, 335
Practical use
Fe simulation as a must tool in cold/warm forging process and tool design, 143
Pre-form design
Tube hydroforming: current research, applications and need for training, 224
Pre-form geometry
Tube hydroforming: state-of-the-art and future trends, 25
Precision forging
Guidelines for precision hot forging with applications, 182
Precision hot forging
Closed die technologies for hot forging, 165
Press systems for hydroforming
Recent developments in hydroforming technology, 252
Process design
Fe simulation as a must tool in cold/warm forging process and tool design, 143
Process simulation in stamping – recent applications for product and process design, 232
Process modeling
New concepts in die design — physical and computer modeling applications, 212
Process stimulation
Process simulation in stamping – recent applications for product and process design, 232
Product design
Tube hydroforming: state-of-the-art and future trends, 25
Prototype
Advances in prototype and low volume sheet forming and tooling, 245
Prototyping
Virtual processing – application of rapid prototyping for visualization of metal forming processes, 116
PVD coatings
Assessment of the thermal effects on chip surfaces, 317

QS 9000
Net shape cold forging to close tolerances under qs 9000 aspects, 150
Quality planning
Net shape cold forging to close tolerances under qs 9000 aspects, 150
Quality tools
Net shape cold forging to close tolerances under qs 9000 aspects, 150
Quench and temper heat treatment
High strength fasteners cold forged out of work hardening steel, 135

Roll design
Investigation of crack formation on the galvalume coating of roll formed roof panels, 53
Roll forming
Investigation of crack formation on the galvalume coating of roll formed roof panels, 53

Section analysis in sheet metals
Numerical and experimental investigation of redrawing of sheet metals, 17
SECTIONFORM
Numerical and experimental investigation of redrawing of sheet metals, 17
Separation by density
Separation of scrap polyethylene pellets by density, 328
Sheet bending
Improvement of hem quality by optimizing flanging and pre-hemming operations using computer aided die design, 41
Sheet metal
Blank holder force (bhf) control in viscous pressure forming (vpf) of sheet metal, 7
Sheet metal forming
Improvement of hem quality by optimizing flanging and pre-hemming operations using computer aided die design, 41
Sheet metal forming processes
Virtual processing – application of rapid prototyping for visualization of metal forming processes, 116
Simulation
Application of cae for hot-forging of automotive components, 176
Splines
Automotive parts produced by optimizing the process flow forming – machining, 171
Splitting roll
Tooling and process control for splitting of disk blanks, 65
Stamping
Process simulation in stamping – recent applications for product and process design, 232
Strain path effects
Strain path effects under hot working: an introduction, 267
Strain space
Strain path effects under hot working: an introduction, 267
Supporting roll
Tooling and process control for splitting of disk blanks, 65

Tetralin
Separation of scrap polyethylene pellets by density, 328
Three dimensional simulations
Turning simulations using a three-dimensional fem code, 99
Three-dimensional simulation
Finite element simulation of the flow-splitting-process, 70
Tool condition monitoring
Applicability of the modified back-propagation algorithm in tool condition monitoring for faster convergence, 299
Tool design
Die design for flashless forging of complex parts, 81
Fe simulation as a must tool in cold/warm forging process and tool design, 143
Tube hydroforming
Tube hydroforming: current research, applications and need for training, 224

Tube hydroforming technology
Tube hydroforming: state-of-the-art and future trends, 25
Tubular products
Evaluation of tube formability and material characteristics: hydraulic bulge testing of tubes, 34
Tungsten carbide
Tool life in cold forging – an example of design improvement to increase service life, 90
Turning
Finite difference calculations of the deformations of multi-diameter workpieces during turning, 310
Turning simulations using a three-dimensional fem code, 99

Variables
Guidelines for precision hot forging with applications, 182
Virtual processing
Virtual processing – application of rapid prototyping for visualization of metal forming processes, 116
Viscous pressure forming
Blank holder force (bhf) control in viscous pressure forming (vpf) of sheet metal, 7
Evaluation of sheet metal formability, viscous pressure forming (vpf) dome test, 1

Whiskers
Effect of thermal residual stress on the high temperature toughening behaviour of tib_2/sic_w composites, 292
Work hardening rates
Strain path effects under hot working: an introduction, 267
